#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-36 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ravinet(4,401911) in view of Yamamuro(3832580).

Ravinet disclose the structural limitation of the generator in figures 9-14: a electromechanical transducer, two electrodes (18 and 19) that are compliant [that apply a voltage that produces a pressure in the polymer less than elastic restoring stress resulting from the stretch by means of electrical current 5 and wherein electrical energy is remove by least two electrodes during contraction], a PVDF polymer (7) [arrange in a manner which causes a change in response to a deflection (13) applied to a first portion(A) of the polymer, wherein a second portion(B) of the polymer is elastically prestrained(fig.11) before deflection when the polymer is applied to a first orthogonal direction to enhance the change in the electric field from a deflection in the second orthogonal direction], a generator (5), a stiff member (20 and 23) [ coupled to at least one transducer wherein the at least one stiff member substantially preventing displacement in the second direction] and a frame. Ravinet also disclose in 14 a frame (27) attached to a second portion of the polymer (2), the frame comprising at least one

Application/Control Number: 09/619,848

Art Unit: 2834

aperture wherein the first portion of the polymer (A) is arranged in a manner which causes a change in the electric field in response to a deflection applied to the third portion of the polymer (B). It is inherent that the generator is capable of converting mechanical energy to electrical and vice versa. Ravinet does not disclose the removal of at least two electrodes during the contraction.

Yamamuro teaches a transducer in fig.1-14 comprising a polymer (1), electrodes (2) on both sides on the polymer and alternating voltage source (3). Yamamuro also teaches in fig.2 removing at least 2 electrodes during the contraction of the transducer for the purpose of removing the piezoelectric effects. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the transducer of Ravinet with the teaching Yamamuro for the purpose of converting electrical energy in to mechanical energy vise versa.

It also is a matter of design choice to choice a polymer comprising a material selected from a group of silicone elastomer, acrylic elastomer, polyurethanea copolymer comprising PVDF with the characteristic of elastic modulus below 100MPA, a maximum linear strain of at least 50 percent, a pre-strained factor in the range of about 1.5 times to 50 times an original area prior to pre-strain, a polymer which can support a change in electric field at about 440 Mega Volts/meter, a polymer that generates a least about 0.15 joules per gram for the polymer and polymer that has an aspect ratio of at least 4:1.

### Response to Arguments

3. Applicant's arguments with respect to claim 1-36 have been considered but are moot in view of the new ground(s) of rejection.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen B Addison whose telephone number is 703-306-5855. The examiner can normally be reached on 8:00 to 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nestor Ramirez can be reached on 703-308-1317. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-3431 for regular communications and 703-305-3431 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
